myelination
ensheathment of neurons
axon ensheathment
axon development
regulation of neuron projection development
cell junction assembly
axonogenesis
synapse organization
glial cell differentiation
gliogenesis

synapse organization
modulation of chemical synaptic transmission
regulation of trans−synaptic signaling
synapse assembly
regulation of membrane potential
regulation of neuron projection development
axon development
cell junction assembly
axonogenesis
regulation of synapse organization

regulation of GTPase activity
positive regulation of GTPase activity
positive regulation of leukocyte proliferation
leukocyte proliferation
positive regulation of mononuclear cell proliferation
mononuclear cell proliferation
regulation of leukocyte proliferation
neuron death
T cell proliferation
positive regulation of lymphocyte proliferation

cytoplasmic translation
ribosome biogenesis
ribonucleoprotein complex biogenesis
ribosome assembly
ribosomal large subunit biogenesis
rRNA processing
rRNA metabolic process
ribosomal small subunit biogenesis
ribonucleoprotein complex assembly
ribonucleoprotein complex subunit organization

receptor−mediated endocytosis
negative regulation of bone mineralization
regulation of response to cytokine stimulus
actin cytoskeleton reorganization
activation of GTPase activity
regulation of GTPase activity
positive regulation of GTPase activity
negative regulation of biomineral tissue development
negative regulation of biomineralization
ensheathment of neurons

protein refolding
positive regulation of supramolecular fiber organization
'de novo' protein folding
response to unfolded protein
negative regulation of phosphate metabolic process
negative regulation of phosphorus metabolic process
myeloid cell differentiation
positive regulation of protein−containing complex assembly
regulation of protein−containing complex assembly
positive regulation of cytoskeleton organization
